

EARLY RELEASE - HALF DAY PROGRAMS

2026-
2027

Super Slime Creations

More wicked cool slime creations! Make out-of-this-world alien slime and fun polka dot slime. Look to the stars when you make shimmering galactic slime and choose your own smell for super smelly slime! Keep the science going while you test your slime creations to see which one is the stretchiest and which one is the bounciest.

Toy Factory

Science has never been so much fun! Take play to the next level as we make our own custom toys. Build a car launcher that shoots a race car across the room and have a race car derby! Make color-changing spinning tops, thaumatropes and amazing optical illusions.

Work it Circuits

Learn how electricity flows using the super cool Snap Circuit System. Work at building electronic projects that fly, buzz, light up and interact with the environment. Once you get the electron flow, build a cool and colorful light-up fiber optic circuit creature to take home.

Build -A -Rama

Build amazing, fun and interactive things. Kick things off with Gravitrax tracks and build intricate marble runs. Then, let loose with Boomtrix, a wild ride of trampolines and bouncing ball bearings. Next, build a take home drawbot to make amazing art creations.

Crazy Chemistry Creations

Chemistry is crazy... and fun! Create shimmering crystals and experiment with bubbling magical potions and fizzing concoctions. Grow glow in the dark crystals and combine acids and bases to make a scented bath bomb to take home.
